

What is claimed is:

[claim 1]

A gaming machine comprising:

game result display means for displaying a game result thereon; and

5 beneficial state generating means for generating a beneficial state for a
player when a predetermined game result is displayed on the game result
display means;

 wherein the game result display means includes first display means
and second display means arranged at a more front side than a display area
10 of the first display means when seen from a front side of the gaming
machine,

 wherein the first display means includes a plurality of symbol display
parts capable of variably displaying one or more of the symbols and
conducting stop display thereof; and

15 wherein the second display means has symbol display areas through
which the symbols displayed on the first display means are transmittably
displayed and window frame display areas are formed around the symbol
display areas in the second display means.

[claim 2]

20 The gaming machine according to claim 1, wherein display mode of the
window frame display area is changed.

[claim 3]

 The gaming machine according to claim 2, wherein a light
transmittance rate of the symbol display area in the second display means is
25 changed when the display mode of the window frame display area is changed.

[claim 4]

 The gaming machine according to claim 2, wherein the display mode of
the window frame display area is changed substantially at the same time

that the stop display of the symbol is conducted.

[claim 5]

The gaming machine according to claim 2, further comprising:

internal winning combination determination means for determining an

5 internal winning combination;

wherein the display mode of the window frame display area is changed
when the internal winning combination determination means determines a
predetermined combination as the internal winning combination.
